

A single platform powering your fleet operations

Element Mobility is an enterprise-grade, fully configurable platform that unifies fleet management, operations, telematics, driver workflows, and analytics—empowering organizations to run smarter, faster, and more cost-effectively.

Built to eliminate manual work, digitize fragmented processes, and provide real-time visibility across your fleet ecosystem, Element Mobility enables seamless coordination between vehicles, drivers, and operations teams. Whether you manage a delivery fleet, passenger transport, or depot operations, Element Mobility adapts to your needs with unmatched flexibility and scalability.

Challenges fleet operations teams face

- Multiple disconnected systems (telematics, reservations, maintenance, CRM)
- Limited real-time operational visibility
- Difficult integrations between data sources
- Inefficient communication with drivers, field teams, and vendors
- Reporting that is slow, static, or incomplete

Where Element Mobility excels

- Streamlined operational workflows & vendor tasking
- Real time notifications and alerts for all vehicle assets
- Driver behavior insights & telematics-based alerts
- Integrations with 3rd party and legacy systems
- Customizable solutions for last mile, passenger transport and car sharing operations

A single platform powering fleet solutions

Optimization Engine

- Automations
- Optimization
- Routing
- Tasks
- Demand prediction
- EV Charging

Control Center

- Real-time fleet tracking
- Visibility and control
- Assets, tasks, reservations, drivers and vendor management
- Reporting and analytics

APIs

Driver/Agent App

- GPS tracking
- Routing assignments
- Complete vehicle inspections
- Field task management
- Proof of delivery

Client Facing Interfaces

- Reservation portal
- Trip and delivery tracking links
- White-labeled passenger app
