

Maximize your fleet and depot operations

High-volume car sharing, rental, and depot-based fleet operations rely on fast vehicle turnaround, accurate availability, and consistent readiness to operate at scale. When manual processes and disconnected systems slow servicing, field execution, and vehicle movement, availability declines and operational costs increase.

Element Mobility addresses these challenges with a single, enterprise-grade platform purpose-built for shared mobility, rental fleets, and depot-centered operations. By unifying reservation management, automated tasking, field execution, inventory visibility, rebalancing, and predictive servicing, Element Mobility increases vehicle availability, streamlines workflows, and reduces operational costs across all fleet types.

The value of Element Mobility

Increases asset availability for rental, car share, and scheduled fleet programs

Improves turnaround time through automated task creation and optimized routing

Reduces downtime with predictive servicing and proactive rebalancing

Provides real-time visibility into vehicles, tasks, field agents, and vendors

Supports both ICE and EV fleets with fueling and charging optimization

A single platform powering fleet and depot operations

Optimization Engine

- Optimized Task Assignment
- Automations
- Demand Prediction
- Fleet Rebalancing

Control Center

- Real-Time Fleet Tracking
- Vehicles, Drivers and Vendor Management
- Reporting and Analytics

APIs

Driver/Agent App

- Receive task assignments
- Complete vehicle inspections
- Real-time tracking of vehicles

Integration Hub

- Robust API integration to 3rd party software, legacy systems and any system of record

Operations Management that fits your needs

Automated Fleet Management

- Dynamic task creation triggered by vehicle status, odometer, or battery/fuel level
- Manage cleaning, fueling/charging, inspections, damage assessments and transport
- Fully customizable workflows to support both depot-based and mobile operations
- Assign tasks to internal staff or vendor networks

Reservation Management

- Create, update, and manage reservations from internal or 3rd-party systems
- Allocate vehicles based on real-time availability across depots
- Automatically block vehicles during servicing, charging, fueling, or downtime

Customizable Reporting and Analytics

- Track business, operational, and financial KPIs
- Analyze planned vs. actual performance for drivers, routes, and assets
- Exportable, filterable reporting for any historical timeframe

Keyless Vehicle Access

- Enable lock/unlock only for authorized tasks
- Audit trail improves compliance and reduces risk
- Eliminates physical key handovers and lost key incidents
- Enable remote rentals and returns with contactless vehicle access
