

Your fleet is already talking. Element Connect helps you listen.

Today's fleets generate more data than ever before. Yet many organizations still struggle with limited visibility, disconnected systems, manual reporting, and reactive decision-making.

At the same time, vehicle technology has evolved.

Many newer vehicles now come equipped with built-in connectivity capabilities, creating a powerful opportunity to access vehicle insights without installing aftermarket hardware. The challenge isn't collecting more data. It's finding a simpler way to access, understand, and act on your data.

Element Connect brings telematics and fleet data, operations, and services together in one platform, giving fleets a simpler way to improve visibility, reduce complexity, and make faster, more informed decisions.

KEY CAPABILITIES

- Access to existing telematics, fleet, and operational data in one unified experience
- Improved visibility into vehicle locations, trips, mileage, and diagnostics
- Reduced reliance on disconnected tools, spreadsheets, and manual reporting
- Simplified access to connected vehicle data through OEM-first connectivity
- Built-in driver consent management that supports compliance and program adoption

How Element Connect delivers value

Unlock the value already built into your vehicles by transforming connected vehicle data into meaningful business outcomes.

Maximize existing investments

Accelerate time-to-value by activating built-in vehicle connectivity capabilities. When additional operational capabilities are needed, such as video cameras, Element can help identify and integrate partner solutions like Samsara.

Unified visibility

Bring location, trips, mileage, and diagnostics together in one platform to gain a clearer understanding of fleet activity, utilization, and vehicle health.

Actionable insights

Turn connected vehicle data into actionable insights that help fleet teams identify trends and make faster, more informed decisions.

Reduced administrative complexity

Centralize vehicle data, reporting, consent management, and governance activities, minimizing the need to work across disconnected systems.

Built for what's next

Element Connect provides a low-friction entry point to connected vehicle data, helping organizations establish a strong foundation for visibility, reporting, and data-driven decision-making.

As connected vehicle programs mature, that foundation can support expanded analytics, connected services, and operational intelligence that help fleets operate more efficiently and unlock greater value over time.
