

Base Connectivity

Make the right decisions for your fleet with the right data from your vehicles

Base Connectivity by Element connects OEM enabled vehicle data and insights. This includes odometer reading, vehicle location and fuel management information, which will flow directly into your Element portal.

Vehicle data is enabling lower costs and richer insights

- Track utilization to right-size your fleet
- Optimize vehicle replacement schedules
- Keep vehicles on the road with preventive maintenance
- Locate missing vehicles

We want to put those data points and insights into your hands, that's why we added a basic package to our standard vehicle ordering offering. The cost, which is about 30 cents a day, will be capitalized into the overall lease package of the vehicle or offered as a monthly rate.

Vehicles currently on road can be added to the program based on vehicle connectivity capability.

For more information, contact your Element account manager or visit elementfleet.com

HERE'S WHAT YOU GET WITH BASE CONNECTIVITY

Simple Activation: Data is collected using OEM-connectivity. No need for additional hardware.

Critical Vehicle Data: Odometer, Location option, and Fuel & EV Levels all come standard.

Easy Access to Data: Data is available where you manage your fleet – Xcelerate and scheduled reports.
