

# EV public charging solution

## Convenient access to growing nationwide charging network

Element has partnered with industry leaders ChargePoint and WEX to provide Element clients with access to ChargePoint's growing nationwide charging network. Our new fueling solution allows clients with EVs to use their Element EV RFID cards to pay for EV charges.

Today fleet managers are challenged with a mix of internal combustion engines (ICE) and EVs as they gradually electrify their fleets. Our solution helps minimize the administrative burden for fleet and charging expenses, while providing the same in-depth reporting, expertise and analytics our clients enjoy today.

### Convenient solution for drivers:

- Access to more than 125,000 ChargePoint charging spots across the U.S, including roaming partners such as Flo, EVgo, EVConnect, and EVBox
- Download the ChargePoint app for locations accepting the Element RFID (Radio Frequency Identification) card – easy to find, simple to use

### Comprehensive solution for fleet managers:

- Seamless direct integration of fuel and charging data into Element's billing system
- Consolidated billing, reporting, visibility and financial controls

We'll help you  
confidently navigate  
your path forward
